Road Work Ahead Construction Supply, Inc.

has been asked to address “**GREEN**” issues involving sealcoat.

In doing initial research on Green Science we have not found any published Specifications or specific guidelines that certify what **GREEN** is for the sealcoat manufacturing industry.

While Road Work Ahead Construction Supply, Inc. is in favor of being environmentally friendly and feel that our products help preserve and extend the life of existing pavements, thus preventing increased use of natural resources.

We feel that since there is no published specification or guidelines that exist today, any advertising to that effect would simply be viewed as a sales tool.

Many of our input products do incorporate recycled products into our seal coat materials which make them environmentally friendly.

These include but are not necessarily limited to:

- 1) Reclaimed/recycled water
- 2) Fiber. Recycled paper
- 3) Fines, such as from bag houses or rock plants
- 4) Crushed natural aggregates such as rock and clays

If you are looking for a product that helps our environment we would encourage you to speak with us about what steps and/or materials we manufacture and how our material might help you in your desire to preserve the environment. If a specification or guideline comes out that says exactly what “**GREEN**” is we will then publish it under our specification section.
