

Granular Ice and Snow Melt

Our liquid ice melt (HICO) is the best product for large scale applications when your customers demand the best. It handles the job of melting ice and snow down to -25°F up to three times faster than any other ice melt product. HICO being a clear liquid leaves no visible residue or tracks like other products. Excellent for those parking lots and high foot traffic areas where HICO can be applied through a spray system via truck tank sprayer or hand sprayer.

When granular options are needed, Sage Supply offers three products covering a wide range of performance and budget. Granular can be spread through a hand spreader or large lawn spreader. Individuals should always wear protective gloves and safety glasses when dealing with ice and snow melt material to reduce skin irritation that could occur when contacted with bare skin.

Chloride Components:	Magnesium/Sodium	Sodium/Calcium	Calcium
Melting Range:	32°F to 0°F	32°F to -10°F	32°F to -25°F
Melting Speed:	Fast	Faster	3X Faster
Dollar Value/Bag:	Good	Better	Best
Applications:	✓	✓	✓

Sidewalks, driveways, porches, patios, commercial, industrial, multifamily residential buildings, hospitals, doctor clinics, university campuses, and municipal buildings

*Calcium and Magnesium should not be applied to concrete surfaces that are less than one year old.
